

CampusAssist AI — Empathy Map Canvas

Project Title: CampusAssist AI – Smart IT Support Portal and AI-Assisted Troubleshooting System
Author: Santhosh Akkiseti
Platform: ServiceNow
Phase: 1. Ideation Phase (1.3)

Student User Persona Empathy Map

This empathy map reflects the mindset and struggles of a campus student dealing with everyday IT issues.

SAYS

- "Why is the campus Wi-Fi disconnecting again during my class?"
- "I locked my account, and I don't know who to contact."
- "I wish there was a fast way to fix basic laptop settings."
- "Submitting a support ticket takes too much time."

THINKS

- "Is this a problem with my laptop or the campus server?"
- "I hope I don't miss my online exam submission deadline."
- "The IT helpdesk will probably take hours to reply."
- "There should be a quick self-service option on my phone."

DOES

- Tries turning Wi-Fi off and on repeatedly.
- Asks classmates if they are experiencing similar errors.
- Searches online for quick troubleshooting steps.
- Walks to the IT helpdesk office when urgent.

FEELS

- **Frustrated:** When basic tasks are delayed by portal lockouts.
- **Anxious:** About missing project deadlines or lab tasks.
- **Helpless:** When helpdesk offices are closed after hours.

PAIN POINTS

- Long response times for simple IT queries.
- Lack of 24/7 technical help on campus.
- Complicated and tedious ticket creation forms.
- Repeatedly explaining the same problem details.

NEEDS

- Instant step-by-step self-troubleshooting instructions.
- Interactive 24/7 assistance via a simple chatbot interface.
- Auto-filled request forms when manual help is needed.
- Clear visibility on request escalation status.

Key Insight

Key Insight: Students don't want to fill out complex forms or wait in line for minor issues like password resets or Wi-Fi drops. They need an interactive, self-service troubleshooting assistant that guides them instantly and only escalates to a ServiceNow ticket when self-help steps fail.
