

CampusAssist AI — User Acceptance Report

Project Title: CampusAssist AI – Smart IT Support Portal and AI-Assisted Troubleshooting System
Author: Santhosh Akkiseti
Platform: ServiceNow
Phase: 3. Project Development Phase (3.2)

1. Purpose

The purpose of this User Acceptance Testing (UAT) report is to verify that the **CampusAssist AI** portal and **CampusCare AI** chatbot meet the functional expectations of students needing campus IT support.

2. User Scenario

A student experiences a Wi-Fi authentication error on campus. The student navigates to the campusassist_home portal, launches campuscare_chatbot, and selects "WiFi". After following the guided steps without success, the student clicks "Escalate to Support". The system opens the pre-filled ServiceNow request form, and the student submits the request into the x_2065601_campus_0_student_it_request table.

3. Main Acceptance Criteria

- Intuitive access to the chatbot widget directly from the Service Portal home page.
- Clear, step-by-step troubleshooting for Wi-Fi, Hardware, Software, and Account Lock categories.
- Ability to reset session state and start a new issue troubleshooting sequence.
- Automatic transfer of chat context (issue type and description) into the ticket request form.
- Successful creation of a new record in ServiceNow upon form submission.

4. Acceptance Test Summary

Criteria	Validation Method	Result
Portal Navigation	Verify loading of campusassist_home and widget rendering.	To be verified
Guided Interaction	Verify chatbot flows for all four issue types.	To be verified
Escalation Flow	Verify pre-filled fields on the escalation request form.	To be verified
Data Persistence	Verify record entry in x_2065601_campus_0_student_it_request table.	To be verified

5. Conclusion

The user acceptance framework ensures that CampusAssist AI fulfills student support requirements effectively through self-service troubleshooting and automated ticket escalation in ServiceNow.
