

CampusAssist AI — Step-by-Step Execution Guide

Project Title:	CampusAssist AI – Smart IT Support Portal and AI-Assisted Troubleshooting System
Author:	Santhosh Akkiseti
Platform:	ServiceNow
Phase:	3. Project Development Phase (3.3)

1. Overview

This document provides the step-by-step procedure to execute, demonstrate, and verify the **CampusAssist AI** portal and **CampusCare AI** chatbot system in a ServiceNow instance.

2. Execution Steps

1. **Log into ServiceNow:** Access your ServiceNow Developer Instance as System Administrator.
2. **Navigate to Table Schema:** Go to **System Definition > Tables** and verify that table `x_2065601_campus_0_student_it_request` is configured with appropriate fields.
3. **Open Service Portal:** Navigate to the Service Portal URL: `https://<instance>.service-now.com/campusassist_home`.
4. **Launch CampusCare AI:** Click on the chatbot widget trigger or open `campuscare_chatbot` page.
5. **Select Issue Category:** Test each troubleshooting flow (Wi-Fi, Hardware, Software, Account Lock).
6. **Test Session Reset:** Click the "Reset Session" button to confirm clearing of chat history and returning to the options menu.
7. **Trigger Escalation:** Select an unresolved issue and click "**Escalate to Support**".
8. **Verify Pre-filled Request Form:** Ensure that the chat context, selected category, and user details populate automatically into the request form.
9. **Submit IT Request:** Click **Submit** and record the generated Request Number.
10. **Verify Backend Table Record:** In ServiceNow, open `x_2065601_campus_0_student_it_request.list` to confirm the new record has been created with correct field values.

3. Demonstration Summary

Following this sequence demonstrates seamless automated self-service, real-time interactive troubleshooting, session state recovery, and accurate escalation record creation within ServiceNow.
