

Document Title: 1.3 Empathy Map Canvas

Author: Santhosh Akkiseti

Project: CampusAssist AI

Phase: 1. IDEATION PHASE

1.3 Empathy Map Canvas

1. Persona & Scenario Definition

Student Persona

- **Name: Alex / University Student**
-
- **Role: Undergraduate / Postgraduate Student across academic departments (e.g., CSE, ECE, ME)**
-
- **Environment: University Campus, Dorms, Library, and Remote Learning Environments**
-
- **Key Characteristics: Digital native, tight academic deadlines, heavily reliant on university network and hardware for coursework and exams.**
-

Scenario

Alex is attempting to submit an urgent assignment due at midnight, but suddenly encounters a campus WiFi connection failure and an account lockout warning on the student portal. Alex needs an immediate, clear, and low-friction way to resolve these issues without waiting for helpdesk opening hours the next day.

2. Empathy Map Canvas Breakdown

2.1 SAYS (What students commonly say about campus IT problems)

- ***"Why does the campus WiFi disconnect every time I have a quiz due?"***
-
- ***"I submitted an IT support ticket yesterday, but nobody has responded or given me an update."***
-

- *"I don't know who to call after 5:00 PM when my student account gets locked out."*
-
- *"The IT form asks so many complicated questions, but doesn't actually help me fix the issue right now."*
-

2.2 THINKS (What students think while experiencing an IT issue)

- *Will I lose my assignment progress if this network issue isn't fixed in 10 minutes?*
-
- *Is this a problem with my laptop settings, or is the university server down for everyone?*
-
- *Why isn't there a quick self-service tool to reset or troubleshoot this automatically?*
-
- *I hope I don't have to walk all the way across campus to the physical IT desk tomorrow morning.*
-

2.3 DOES (What students currently do when an IT issue occurs)

- Tries toggling WiFi on/off, restarting their laptop, or searching online forums for basic steps.
-
- Asks classmates or messaging groups if anyone else is facing the same technical issue.
-
- Fills out a static IT contact form or sends an email to a generic support inbox.
-
- Waits passively for a response while worrying about impending assignment deadlines.
-

2.4 FEELS (Emotional state during an IT incident)

- Frustration: High annoyance due to unexpected technical roadblocks right before submission deadlines.
-

- **Anxiety / Urgency:** Fear of academic penalties caused by system outages or lockouts beyond their control.
-
- **Helplessness:** Feeling stranded when issues occur outside standard helpdesk business hours.
-
- **Confusion:** Uncertainty regarding whether their support ticket was received or who is handling it.
-

3. Pain Points, Needs & Expectations

Pain Points

- **High Response Latency:** Long queues for basic Level 1 issues (e.g., WiFi configuration, account access).
-
- **Lack of 24/7 Availability:** No active assistance during late-night study sessions or weekends.
-
- **Repetitive Explanations:** Having to re-explain technical context if an issue is escalated or handed off to another technician.
-
- **Static Support Resources:** Difficulty finding relevant, clear instructions in lengthy PDF user guides or static FAQ pages.
-

Needs

- **Instant Guidance:** Immediate, step-by-step diagnostic assistance available at any hour.
-
- **Clear Escalation Path:** A direct route to submit a formal request if automated troubleshooting fails.
-
- **Context Preservation:** Automatic transfer of issue details to the support team without manual re-typing.
-
- **Multi-Category Support:** A single platform capable of assisting with WiFi, Hardware, Software, and Account access problems.
-

Expectations

- A responsive, modern interface that works seamlessly on any browser or mobile device.
-
- Clear confirmation when a request has been lodged in the system.
-
- Minimal effort required to get an issue resolved or escalated.
-

4. Key Insights & Design Implications for CampusAssist AI

Student Empathy Finding	Key Insight	Design Implication in CampusAssist AI
Instant Gratification Needed	Students want immediate action, not queuing for routine issues.	Integrate CampusCare AI chatbot on the main portal page for instant 24/7 interaction.
Guided Self-Service Preferred	Students prefer quick self-fixes over waiting for human support.	Implement interactive troubleshooting flows for WiFi, Hardware, Software, and Account Lock.
Frustration with Friction	Filling long forms with technical jargon increases drop-off and frustration.	Automate data passing using sysparm_query to pre-fill the Student IT Request form upon escalation.

Context Loss Causes Delay	IT staff ask repetitive questions because initial ticket logs are empty.	Transfer the full troubleshooting session log directly into the ticket description during escalation.
Frequent Sequential Issues	Students may encounter multiple technical issues in a single session.	Build Multi-Issue Session Management into CampusCare AI to easily reset state between queries.

End of Document Metadata

- **Document Title:** 1.3 Empathy Map Canvas
- **File Name:** 1.3 Empathy Map Canvas.pdf
- **Phase:** 1. IDEATION PHASE
- **Purpose:** To map student behaviors, feelings, thoughts, and pain points, directly translating user empathy insights into the structural design of CampusAssist AI and CampusCare AI.
- **Recommended Diagrams:** Empathy Map Canvas Structure (Provided in Section 5).
- **Recommended Screenshots:** None required for this theoretical design analysis document.
